CAREER OBJECTIVE

Results-driven AI & Data Science professional with hands-on experience in machine learning, predictive modeling, and analytics. Skilled in **Python**, **SQL**, and **ML** frameworks. Passionate about turning data into solutions to drive business value and decision-making. Eager to join innovative teams and contribute to impactful projects in real-world domains.

EDUCATION

Bachelor of Technology – **Computer Science and Engineering**

Government College of Engineering Kannur
(2019-2023) CGPA: 6.43

Higher Secondary – **Science**

ST Chrysostom's GHSS Nellimoodu Thiruvananthapuram
(2016-2018) CGPA: 8.1

CERTIFICATIONS

Certified Data Scientist – *IABAC* (September 2025)

Data Science & Artificial Intelligence Expert – *IABAC* (July 2025)

Certified Data Scientist - *NASSCOM* (November 2024)

Certified Specialist in Machine Learning and Artificial Intelligence - *ICT Academy of Kerala* (August 2023 – February 2024)

EXPERIENCE

Data Science Intern – Rubixe (February 2025 – August 2025)

- Worked on end-to-end ML/AI projects across multiple domains including healthcare, telecom, HR, gaming, and climate analytics.
- Built and deployed supervised learning models (classification & regression) using Python, Scikit-learn, XGBoost, and Pandas, achieving up to 95% accuracy in real-world applications such as bankruptcy prediction and churn analysis.
- Conducted EDA, feature engineering, outlier handling, and model tuning to solve business problems like car price prediction, customer churn classification, and Game winning Prediction.
- Delivered visual insights and dashboards with Matplotlib and Seaborn effectively communicating data-driven findings and model outcomes to stakeholders.

SKILLS

Programming & Scripting
Python (NumPy, Pandas, Scikit-learn), SQL

Data Analysis & Visualization
Exploratory Data Analysis (EDA), Data Cleaning, Feature Engineering, Model Evaluation, Matplotlib, Seaborn

Databases & Version Control
MySQL, MongoDB, Git, GitHub

Frameworks & Deployment
Flask (basic), GitHub (basic)

Machine Learning
Supervised & Unsupervised Learning, Regression, Classification, Clustering, Ensemble Methods (Random Forest, XGBoost, LightGBM), Hyperparameter Tuning, Cross-validation, Model Optimization

Deep Learning & AI
Neural Networks (TensorFlow & Keras), Convolutional Neural Networks (CNNs), Computer Vision (OpenCV)

Tools & IDEs
Jupyter Notebook, Google Colab, VS Code

PROJECTS

Imported Car Price Prediction | Feb 2025 – Mar 2025 *(Capstone Project)*

- Analyzed automobile import dataset with 26 attributes, including engine, brand, body-style, mileage, and design specifications.
- Performed data preprocessing: handled missing values, treated outliers using median imputation, and standardized numerical features.
- Applied feature engineering: one-hot encoding for categorical features, correlation analysis to drop multicollinear variables, and data splitting.
- Trained and compared multiple regression models (Linear, Ridge, Random Forest, Gradient Boosting, XGBoost, LightGBM, CatBoost).
- Achieved R^2 score of 0.94 with tuned XGBoost, providing accurate insights into factors influencing car prices.

Skills Applied: Python, Pandas, Scikit-learn, XGBoost, LightGBM, CatBoost, Feature Engineering, Model Evaluation

Skin Disorder Diagnosis | Mar 2025 – April 2025 *(Capstone Project)*

- Conducted EDA on clinical and histopathological features (e.g., erythema, scaling, papules, infiltrates) to identify key differentiators of skin disorders.
- Addressed data quality challenges by imputing missing values, handling class imbalance with SMOTE, and selecting top predictors using feature importance analysis.
- Built and compared multiple ML models (Logistic Regression, Random Forest, XGBoost, Gradient Boosting, SVM) achieving above 90% test accuracy with Logistic Regression and XGBoost.
- Generated interpretable decision rules and early disease markers (e.g., band-like infiltrate for Lichen Planus, hyperkeratosis for Psoriasis) to assist clinicians.
- Delivered actionable insights that support early, non-invasive diagnosis, reducing reliance on biopsies and improving patient outcomes.

Skills Applied: Python, Pandas, Scikit-learn, XGBoost, SMOTE, Data Visualization (Seaborn, Matplotlib), Feature Engineering

Game Winning Prediction – PUBG | April 2025 - May 2025 *(Capstone Project)*

- Analyzed a large-scale PUBG dataset with multiple in-game features, focusing on combat, survival, and movement statistics.
- Engineered impactful features such as killsPerWalk and damagePerKill, while applying IQR-based outlier treatment.
- Evaluated 10 ML models (Linear, Random Forest, XGBoost, LightGBM, etc.) with MAE, RMSE, and R^2 metrics.
- Achieved 91% R^2 score with tuned LightGBM, outperforming linear and tree-based models.
- Derived actionable insights, showing kills, damage, and survival boosts as the most influential factors in winning.

Skills Applied: Python, Pandas, Scikit-learn, XGBoost, LightGBM, Feature Engineering, Model Evaluation

Customer Transaction Prediction | May 2025 – June 2025 *(Capstone Project)*

- Built a binary classification model to predict customer transactions using a high-dimensional and imbalanced dataset.
- Applied SMOTE to address class imbalance (~10% positive class) and used RobustScaler for normalization.
- Reduced feature space from 200 to 50 features using SelectKBest, improving efficiency and interpretability.
- Trained and compared multiple models (Logistic Regression, Random Forest, Gradient Boosting, etc.), achieving ROC-AUC ~0.81 with tuned Logistic Regression.
- Delivered insights on customer behaviour and provided a production-ready predictive framework for transaction forecasting.

Skills Applied: Python, Pandas, Scikit-learn, SMOTE, Logistic Regression, Feature Selection, Model Evaluation
